

■ **Using Multiple Public Clouds In Your Business? Try Out Cross-Cloud**

Public clouds are commonplace among businesses these days. A public cloud is an IT model where on-demand computing services and infrastructure are managed by a third-party provider and shared with multiple organizations using the public Internet. About 73% of businesses are currently using two or more public clouds. This is becoming a problem because most public clouds are not designed to operate alongside other cloud systems.

cloud environments. The cross-cloud operating model is aimed at fixing any inconsistencies between clouds and making them more compatible with each other. With cross-cloud, operators can deploy, monitor and manage apps for every cloud. This will allow businesses to spend more time working on their business and less time trying to manage multi-cloud dilemmas. The VMware Cross-Cloud services portfolio is an industry-first, multi-cloud architecture that unifies app and cloud infrastructure, development and operations.

Almost half of technology executives report that their cloud structure is increasingly complicated, but they are looking to increase consistency across their public

■ **The Worst Month For The Stock Market Since The Pandemic Began**

The stock market saw a very rough start to kick off 2022. Some stocks that saw rises throughout the past two years suffered from the opposite effect in January. Vaccine maker Moderna, one of last year’s top-performing stocks, started the year down nearly 40%. This drop is believed to be caused by research suggesting that the firm’s booster shot is less effective against the omicron variant.

Another company that experienced a big drop is Netflix. They had poor fourth-quarter earnings and saw their shares drop 37% in January. With higher prices announced for every streaming package on Netflix, it seems unlikely that their stock is in for an immediate bounceback. Other stocks that had a major negative trend in January are Etsy, Advanced Micro Devices, Nvidia, Caesars Entertainment and Domino’s Pizza. Stocks have swung wildly since the year began, and only time will tell if things return to a level of normalcy for many companies that had stock increases throughout the pandemic.

Who Wants To Win A \$25 Gift Card?

We’re starting a new trivia series! Every month the first person to call us with the correct answer to the trivia question listed below will win a \$25 gift card. Last month, the correct answer was: **D) Harvard**

You can be the Grand Prize Winner of this month’s Trivia Challenge Quiz! Just be the first person to correctly answer this month’s trivia question and receive a \$25 Amazon gift card. Ready? Call us right now with your answer!

What company did the founders of YouTube work for before starting up YouTube?

a) PayPal
b) Google
c) Disney
d) Amazon

Call us right now with your answer! (855) 536-5052

PC Tips & Tricks

1. Whether it’s to the cloud or an external drive, back up your data on a regular basis. This will protect your information from being lost in a disaster, accidentally deleted, or held for ransom by hackers!
2. It’s never a bad time to do a little PC file spring cleaning. Removing/storing old unused files elsewhere can help improve the performance of your machine !
3. If you ever receive an email from someone you know that looks a bit suspicious and phishy, give the person a call to verify that they sent the email.
4. Regardless of your machine’s operating system, be sure to install desktop antivirus protection.

If you own or operate a business, there are plenty of things you must do to ensure success. You have to make the right hiring decisions; develop a product or service that you can sell; build relationships with clients, employees and partners; and much more. One of the biggest responsibilities that comes with owning or operating a business is ensuring that your business is compliant with any guidelines put in place by regulatory bodies.

Every business needs to make an effort to stay compliant, and a big part of that is making sure your cyber security practices are up to standards. With technology rapidly advancing and regulations changing fairly often, you have to stay up-to-date on any changes that should be made going forward. You also need to make an effort to plug any holes in your current cyber security plan.

You can do this by asking yourself a few questions and making the

necessary adjustments if you answer no to any of the following:

- Is my business protected by a firewall and antivirus software?
- Do I use backup solutions, and do I have a disaster recovery plan in place?
- Has my storage stayed up-to-date with any technological changes?
- Do I have any content or e-mail spam filtering software?
- What data am I encrypting?

Ensuring that your business stays compliant will be extremely important in maintaining client and employee relationships. If a customer’s information gets compromised because your business did not have the necessary cyber security in place, they probably won’t come through your doors again. As technology changes and evolves, so do many of the regulations and cyber security

practices that you should put in place. It can be difficult to become compliant if your business was lacking previously. Luckily, there are a few steps you can take to help ensure that your business becomes and stays compliant with any regulating bodies.

First, you should document all of the consumer data your business holds. If a customer asks what information your business has collected on them, then you should be able to give them an honest answer. You might also be obligated to share this information. By keeping and maintaining this information, you will be able to supply your customers with it if they ever do ask.

It can also help greatly to partner with a managed services provider who manages IT needs since they will be able to perform routine IT data checks and work to better protect your customer and the private information within your business. MSPs go a long way toward helping all of your potential IT needs, but their usage when it comes to cyber security, protection and compliance should not be underestimated. Partnering with an MSP will help get your business on the fast track to becoming cyber-secure.

Another big part of ensuring that your business stays compliant is to introduce cyber security training for all of your employees. Did you know that 95% of cyber-attacks

start with human error? If your team has not bought into a cyber-secure culture or does not know the proper cyber security practices, you could be in some trouble. Make sure that cyber security training is part of your onboarding process and continue to train your employees throughout their tenure with your business.

Once your employees are aware of the risks of cyber-attacks and have bought into a cyber-secure culture, it's time to upgrade your cyber security. One of the best things you can do for your business is to invest in regular software patching. Technology is ever-evolving, and we should make the necessary changes to ensure it continues to cooperate with our network and systems. Put technology in place to cover these holes or partner with an MSP that can help take care of any lapses in your cyber security.

Additionally, you should invest in some content-filtering software. There are plenty of toxic websites with nefarious intent that can wreak havoc on your cyber security if accessed by an employee on your network. Content filtering allows you to restrict certain websites. It also goes a step further by recognizing patterns in websites that have malicious codes and blocking those websites that might pose a risk.

Cyber security and compliance work right alongside each other. If you're trying to ensure that your business stays compliant, you need to buff up your cyber security practices. There are many methods you can take to do this, but if you're unsure of where to begin, give us a call. We would be glad to help you take the next steps toward creating a cyber-secure business.

Cyber security and compliance work right alongside each other.

Do You Safeguard Your Company's Data And Your Customers' Private Information BETTER THAN Equifax, Yahoo and Target Did?

If the answer is "NO" – and let's be honest, the answer is no – you are leaving yourself and your company open to massive liability, *millions* in fines and lost business, lawsuits, theft and so much more.

Why? Because you are a hacker's #1 target. They know you have access to financials, employee records, company data and all that juicy customer information – social security numbers, credit card numbers, birth dates, home addresses, e-mails, etc.

Don't kid yourself. Cybercriminals and hackers will stop at NOTHING to steal your credentials. And once they have your password(s), it's only a matter of time before they destroy your business, scare away your customers and ruin your professional and personal life.

Why Not Take 4 Seconds Now To Protect Yourself, Protect Your Company And Protect Your Customers?

Our 100% FREE and 100% confidential, exclusive CEO Dark Web Scan is your first line of defense. To receive your report in just 24 hours, visit the link below and provide us with your name and company e-mail address. Hopefully it will be ALL CLEAR and you can breathe easy. If your company, your profits and your customers are AT RISK, we'll simply dig a little deeper to make sure you're protected.

Don't let this happen to you, your employees and your customers. *Reserve your exclusive CEO Dark Web Scan now!*

Shiny New Gadget Of The Month:

Bird Buddy

Bird-watching from your home has never been easier. Bird Buddy is the newest development in the world of birdhouses. Bird Buddy looks like your normal birdhouse but has so much more to it. It has a built-in camera that will send a push notification to your phone whenever a bird is visiting. Bird Buddy comes standard with artificial intelligence bird recognition so you'll know exactly what types of birds visit your home. It's easy to install and can even be mounted to the outer walls of your house or on fence posts. It's built from incredibly durable materials; you won't have to worry about inclement weather or squirrels destroying your birdhouse. Bird Buddy is the most advanced birdhouse on the market and is available for pre-order now.

10 Habits To Ensure Equality In Your Hybrid Team

Businesses across the country are switching over to hybrid work environments. If you're in this boat, you may be wondering how to keep things fair between your remote and in-office employees. Below you'll find 10 habits to implement that will create an equal environment for all of your employees.

Change How You Track Productivity

When you work in an office, many consider "working" to simply mean being in a work environment. If you have a hybrid team, you need to come up with a new system to track productivity. This measurement should be based on output and results.

Standardize Your Meetings

It can be awkward and frustrating for a remote employee who can't hear or see what's going on during a meeting due to poor camera angles or audio issues. It can help to have your entire team meet on Zoom rather than just those who are working remotely.

Use Public Channels

Use public channels like Slack or Microsoft Teams for communication between your team to ensure everyone is in the loop.

Digitize Your Resources

You need to have digital resources readily available for your remote team members because they can't simply ask their nearest coworker or check office records for information.

Keep Remote And Office Workplaces Consistent

You may have spent a lot of money designing your workplace, but you also have remote employees who may be working in cramped spaces. Make sure your design principles extend to your remote employees. This will help so that productivity, safety, training and brand representation will all remain consistent.

Diversify Company Rituals

Many businesses focus on creating a company culture, but this becomes difficult with remote and in-office employees. You need to make sure your company and team-building rituals include everyone.

Equal Rewards

There should not be a difference between the rewards your in-office and remote employees receive. Make sure you are acknowledging your remote employees on public channels and sending them gifts or perks since they can't participate in team lunches.

Coordinate Team Schedules

If you have employees coming and going from the office at all hours of the day, communication can get fuzzy. Try to keep your departments' schedules lined up so people can still use one another as resources.

Repeat Important Announcements

Your remote employees will not be in the break room hearing about everything that's happening in the office. You need to keep them informed of any ongoing developments with the business or other major announcements.

Seek Feedback

You should always try to get feedback from your remote and in-office team members so you can make necessary adjustments. The experience needs to work for all of your employees, so feedback is critical.

By putting some of these tactics into action, your hybrid team will be working more cooperatively and efficiently than ever before.

Laurel Farrer is the president of the Remote Work Association and CEO of Distribute Consulting. She specializes in advocating for the impact of workplace transformation on corporate and economic growth.

Do you need a password manager?

Every day, hacking becomes more sophisticated than ever to get to your systems and data. To protect yourself and your organization have you updated your passwords? Do you know the recommended requirements for passwords? Does your company have a password policy in place? Do you use the same password for different systems?

Here are some important recommendations for securing your passwords:

- At least 12 characters (or greater) in length and include at least 1 uppercase letter, 1 lowercase letter, 1 number, and 1 special character
- Never use the same password twice (always create a different password for different sites and accounts)
- Never use personal information that can be easily guessed (like your birthday, pet names, address ,etc)
- Don't use single dictionary passwords or common phrases
- For passwords you need to remember use sentences that have meaning to you (ex. MyF@vorit3Movie!5St@rWars)

With the complexity of passwords being harder to remember and that you probably have so many, now is the time to consider a secure password manager. As we have recently researched many of the products on the market, we're happy to provide a recommendation!
