

What's New

1. If an online shopping deal seems too good to be true, it probably is.
2. The holidays are an ideal time for phishing scams! If you ever receive an email from someone you know that looks a bit suspicious and phishy, give the person a call to verify that they sent the email.
3. Think your internet is running slowly? Try using speedtest.net to verify your network speeds.
4. If a browser window randomly pops up on your screen while browsing telling you that you have a virus, no need to be alarmed. These types of pop-ups are common and do not actually indicate an infection. Never click on links within the pop-up window to avoid infection. Simply close the window using the shortcut:

IT News, Trends And Information You May Have Missed In 2022

The year 2022 will soon be on its way out the door. It became a year full of ups and downs for many small businesses, but it still felt more promising than the past few years in the midst of the pandemic. Many small-business owners used this past year to reevaluate their IT services. Some needed to strengthen their cyber security defenses while others utilized new advancements to further assist their customer base.

If you're a small-business owner, it's essential that you're aware of the IT news, trends and events that took place in the recent past. In fact, knowing what happened in the previous year can allow you to develop plans for the future so 2023 will be successful for you and your business. You shouldn't continue following old trends because the competition will quickly leave you behind, and that could open you up to cyber-attacks you didn't know

existed. Don't worry, though; we're here to help. Here are our picks for the most important IT events and trends of 2022.

Refined Artificial Intelligence

Artificial intelligence (AI) has come a long way over the past few years. Many people associate AI with video games or using GPS for travel, but many companies have started to implement AI in new ways to boost their businesses. It's even being used to automate certain tasks, provide insight through data analysis and assist customers with their needs.

AI has proved incredibly beneficial when used to help customers, and this can be seen when looking at various small-business websites. They use AI to answer common questions their customer base has, which provides quick, efficient results for their customers, who leave satisfied with their interaction.

Continued on pg.2

Around 37% of businesses now utilize AI in the workplace, according to a survey conducted by Gartner. Another study by NewVantage Partners found that nine out of 10 leading businesses have investments in AI technologies. So, if you want to get ahead of your competitors, implement AI into your business.

Managed IT Services Providers Continuing To Grow In Popularity

Gone are the days of having an in-office IT person or team. A more cost-effective solution has been gaining traction over the past few years and will continue to do so for the foreseeable future. Managed IT services providers (MSPs) install, support and maintain all the users, devices and PCs connected to your network on a routine basis. MSPs can even prevent common problems such as lost devices, hardware failures, fires, natural disasters and a host of other issues that can interrupt or outright destroy your IT infrastructure and the data it holds. The managed IT services industry is growing immensely. At the end of 2021, the industry was valued at \$239.71 billion, and it's estimated to grow by over 13% annually until 2030. Businesses of all sizes have realized the value of MSPs and are using them to their advantage.

“At the end of 2021, the industry was valued at \$239.71 billion, and it's estimated to grow by over 13% annually until 2030.”

Major Cyber-Attacks Of 2022

Cyber-attacks happen all the time. As new cyberthreats emerge, we'll see more frequent and severe cyber-attacks over the next few years. Uber saw another cyber-attack this past September that caused the company to shut down its internal messaging service and engineering systems in order to get to the bottom of the incident. Cryptocurrency storage and blockchain were also high-value targets for cybercriminals. Ronin and Crypto.com suffered severe cyber-attacks that required both companies to reimburse their users for the cryptocurrency stolen in the attack. Ronin was hacked for \$540 million, and Crypto.com was hacked for \$33 million worth of cryptocurrencies.

Small businesses weren't safe from cyber-attacks, either. While cyber-attacks on big businesses make national news, small businesses are targeted more often since their cyber security defenses aren't as strong. That being said, it's imperative you ensure your business has efficient cyber security practices in place, so you won't have to worry as much about cyber-attacks.

The IT industry is consistently changing to keep up with new developments and advancements. If you're a small-business owner, it's vital to keep up with the latest news and information so you can best protect your business and its data. When you stay ahead of the trends, it's much easier to prevent potential cyber-attacks and threats.

Do You Safeguard Your Company's Data And Your Customers' Private Information BETTER THAN Equifax, Yahoo and Target Did?

If the answer is "NO" - and let's be honest, the answer is no - you are leaving yourself and your company open to massive liability, millions in fines and lost business, lawsuits, theft and so much more.

Why? Because you are a hacker's #1 target. They know you have access to financials, employee records, company data and all that juicy customer information - social security numbers, credit card numbers, birth dates, home addresses, e-mails, etc.

Don't kid yourself. Cybercriminals and hackers will stop at NOTHING to steal your credentials. And once they have your password(s), it's only a matter of time before they destroy your business, scare away your customers and ruin your professional and personal life.

Why Not Take 4 Seconds Now To Protect Yourself, Protect Your Company And Protect Your Customers?

Our 100% FREE and 100% confidential, exclusive CEO Dark Web Scan is your first line of defense. To receive your report in just 24 hours, visit the link below and provide us with your name and company e-mail address. Hopefully it will be ALL CLEAR and you can breathe easy. If your company, your profits and your customers are AT RISK, we'll simply dig a little deeper to make sure you're protected.

Don't let this happen to you, your employees and your customers. Reserve your exclusive CEO Dark Web Scan now!

Shiny New Gadget Of The Month:

The Ekster Parliament Wallet

We carry sensitive information in our wallets. They hold our driver's licenses, credit cards, family photos and more. It makes sense that we would want to do everything we can to keep our wallets safe. Now, there's a wallet available to help us. The Ekster Parliament Wallet is a premium-leather, RFID-blocking smart wallet. With the press of a button, the built-in aluminum card holder fans out your cards for easier access. It protects your cards from skimming and is available in 10 brilliant colors. For an additional price, you can add a tracker card to your wallet so you can find it if you leave it somewhere. There's never been a smarter wallet than the Ekster Parliament Wallet.

Want To Hire More Millennials? Here's How To Attract Them!

While giving a seminar, I was recently asked by an audience member, "How do you get millennials to work for you?" This is a fair question since the workplace has changed dramatically over the past few years, and some of the most talented individuals across various industries are millennials. So, how *do* you best attract them?

I felt tempted to point out the "Five Fs of Selling" straight out of the *Who* book I wrote with Randy Street. We researched and identified a checklist of items that successful leaders use to sell people on joining their organizations. After reviewing our research, we determined five common ways successful leaders got people to join their teams – fit, family, freedom, fortune and fun. The one that applies most when it comes to attracting millennials is the first F: fit.

I believe it's a common misconception that millennials are lazy or want all sorts of exceptions made. Most millennials aren't choosing employment someplace simply because they are allowed to bring their dog to work or because they are provided with free massages, coconut water or other goods. On the contrary, I think most millennials want to work for a company they can believe in. They want to believe their job has meaning or has a positive impact on a broader set of people.

When hiring a millennial, you should know your company's reason for being. In order to get them to accept the job you're offering, it must "fit" that person's value system. Sell that point hard. Many companies I see fail to put enough emphasis on this.

The executive who recently asked me how to get millennials to work for their business was missing

something. He worked for a company that, in my opinion, offers terrific value. This company provides equipment and services to bring clean drinking water to people all over the world! Imagine having a company mission so profoundly valuable it could attract millennial talent. Yet, in this company's hiring practices, website and selling tactics to prospective employees, I noticed they were totally under-selling this critical point. They already had a mission that fits within many millennials' belief systems but simply failed to sell that idea through recruiting or hiring.

If you want to make your business a place where millennials want to work, you must ensure your company's values align with those of the person you're recruiting or interviewing. If you can articulate your company's reason for being and show how it fits that candidate's reason for living, you'll have no problem attracting talented millennials to your business.

Dr. Geoff Smart is the chairman and founder of ghSMART, a leadership consulting firm that helps leaders amplify their positive impact on the world. Dr. Smart and his firm have published multiple New York Times bestsellers. He stays active in his community and has advised many government officials.

Should your laptop be encrypted?

Imagine setting your laptop down at your favorite coffee shop to add cream to your coffee and, when you turn back, your laptop is gone. It's nowhere to be found, nor is the thief who stole it.

A password will slow the thief down, but that won't stop someone (who is stealthy enough to disappear) from removing the hard drive and connecting it to another computer to get to all of your files, passwords, and e-mail – it's easier than you think.

Encrypting your files is the best way to protect them! With the drive encrypted, a thief can't just connect it to another system and then suddenly have access to all your files. This is **ESPECIALLY** important if you store or have access to medical records, credit card information or other sensitive data.

Need help making sure your device is encrypted? Feel free to ask anyone on our team or give us a call today!

2 Challenges E-Commerce Businesses Face And How To Overcome Them

With the Internet came a new digital marketplace that allowed people to purchase specific products they couldn't find in their hometowns. These days, most businesses offer a way to buy their products or services online, whether it's through their personal website or an e-commerce marketplace like Amazon. Despite this, selling online brings new challenges you don't often see when selling from within a brick-and-mortar location. Here are some challenges to watch for and solutions to overcome them.

Payments

Oftentimes, e-commerce businesses need to deal with chargebacks. This happens

when a customer disputes a charge on their credit card statement, causing you to lose out on the sale and the item. To avoid this, have a clear and concise return policy. You should also keep detailed records of all transactions and shipments to prove the customer received their order.

Shipping

Shipping delays can leave customers feeling frustrated, even if they aren't the company's fault. You can't do anything to control hazardous weather, but you can set a reasonable range of time for your customer to receive their item. You don't have to promise two-day shipping just to compete with Amazon. It can also help to utilize shipping management software to automate your shipping processes.

Coping With Stress

Nearly everyone deals with stress at some point in their lives, and most business leaders struggle with it regularly. The good news is that you don't need to live with extreme levels of stress. There are simple solutions to help you cope better. Below you'll find three ways to lessen the amount of stress in your life.

- Be aware of how much stress you take on. You need to know how much stress your body and mind can reasonably take on before you start to struggle.
- Set boundaries and say no when needed. You can't agree to do every task or help every person without adding more stress to your plate. Know how much is too much, and don't take on tasks that are too demanding for your current state of mind.
- Meditate, breathe deeply and exercise to relax your body and mind. Stressors won't feel so drastic when you're relaxed.

Who Else Wants To Win A \$25 Gift Card?

We're starting a new trivia series! Every month the first person to call us with the correct answer to the trivia question listed below will win a \$25 gift card. Last month, the correct answer was: **b) A coffee pot, to know when it was empty**

You can be the Grand Prize Winner of this month's Trivia Challenge Quiz! Just be the first person to correctly answer this month's trivia question and receive a \$25 Amazon gift card. Ready? Call us right now with your answer!

Which search engine almost bought Google in the 1990s?

- A. Yahoo
- B. Lycos
- C. AltaVista
- D. Excite
